SUPER SLICER with handles for comfort & safety

Attaching handles to blades:

Placing fingers over holes on either side, press sharp side of blade onto a firm, protected surface. Press pegs of handle piece through holes on blade. For correct placement, longer part of handle should be angled slightly up diagonally from blade. Hold handle in place and place mirror handle piece against other side of blade. Holding the two pieces together, place saddle on top and snap into place. Match up circular cutout to be sure saddle is facing the right way. Repeat with remaining handle.

Removing handles from blades:

Press sharp side of blade onto a firm, protected surface. Insert pointed object into the small slot on top of handle. Gently press upward on saddle to release. Pull both handle pieces away from blade. Repeat with remaining handle.

Caution: Blades are sharp!
